Part B for July 43

SUBJECT

Supply water to the Imperial Dairy Farm from the Koramangala Tank

To the Secretary to the Hon'ble the Resident in Mysore
Letter no Pol 182 & 23-7-43

States that the Govt of Mysore cannot admit the claim of the Dairy Farm that they are entitled to the use of the water from the Koramangala Tank and that however the water from the tank will be allowed to spare all the needs, Bangalore will be allowed to spare all surplus water from the tank to the farm provided they pay for the water so supplied on terms and conditions to be mutually agreed upon by the authorities of the farm and the Mysore

Supply of water to the Imperial Dairy Farm (8

Continuation Sheet Mil File No 79 7317 2 of 41 Page

41) In this office letter No Pol 161 dated 21st July 1942 the Residency were informed that it was the intention of the Government of Mysore to drain the Koramangala tank of its water permanently in order to abate the mosquito nuisance both in the City and C & M Station area and that in regard to the supply of water for irrigating the farm lands attached to the Imperial Dairy Institute, it was stated that these lands were above the water spread of the tank and are adjacent to it, and do not come under the atchkat lands of the tank and that no water ~~is water~~ is being directly used for the farm lands from the said tank It was also suggested that the three wells in the Institute ~~and as well,~~ derive their supply of water from the springs and the normal underground drainage even after the tank is depleted as there would be a constant flow of water in the sewage channel and that in the event of an ~~apprehend~~ apprehended failure of water supply in the said wells, the difficulty could be overcome (1) by excavating wells in the tankbed or behind the tankbund and installing pumps, and (2) to treat the sewage and supply the existing wells and (3) to use the treated sewage after the plant has been erected by the Bangalore City Municipality and put into working order in about 2 years It was suggested that the expenditure on the above alternative would have to be incurred by the Imperial Dairy Institute, and that if the sewage water is to be used, the same will have to be purchased by making an arrangement wit the Bangalore City Municipal Council

42) All the above points are now contended by the Director of the Institute who states that the farm will no

not have sufficient supply of water unless sewage water is given direct from the main sewage tunnal He states as follows against each of the above points -

(1) It is not correct to say that the water is not supplied direct from the tank to the farm On the other hand it is being directly used as the water is let into a sub tank dredged on the farm lands - which forms part of the tank itself and from this, the water is let constantly by means of channels into the above three wells for irrigation purposes ~~As well~~ and it must be conceded that water is being taken directly from the tank

2 In regard to the point that wells are not likely to dry up owing to the constant flow of water in the sewage channel and the presence of moisture ~~of the~~ tank bed, it is stated that experience has proved otherwise ~~and that the~~ as, with the diversion of the main channel, the level of water in the wells has gone down and that the supply of water could be had from the wells only for a few hours It is therefore requested that a sufficient quantity of water may be made available from the sewage channel direct.

3 In regard to our suggestion to improve the water supply by sinking wells in the tank bed or behind the tank bund and installing pumps, it is stated that such a measure would ~~not enable~~ imply a large capital expenditure which the Government of India would not be able to provide during the war time and that the necessary equipment for installing pumps would be difficult to obtain and that even then, it is not sure to get the necessary quantity of water.

4 It is suggested that the best way of overcoming the

the difficulty is to treat the sewage and supply the existing wells and that no tapping should be allowed on the main sewage channel during ~~the course~~ its course to the tank and that "a take off" for feeding the tank from the main channel will have to be considered when a pucca sewage is built over the main channel

43) It is pointed out that that the farm has drawn water direct from the tank from 1905, the date of its inception and that this "right" of the farm should not be deprived by the depletion of the tank and if it has to be done, the sewage water should be supplied free of charge, to the farm as soon as the sewage treating station is established The Director of the Institute has therefore suggested that in order to enable the institute to supply fodder from its valuable dairy stock from which they have to supply a daily output of milk up to 7,000 pounds for the troops in Bangalore as an emergent war measure, the farm should be supplied with a sufficient quantity of sewage water from its main channel to meet the present demand for of water for the cultivation of the fodder, the sewage being properly treated before water is let off from the tank The action to ~~should~~ be taken after the main sewage channel is built and the sewage plant is put into working order is also suggested

44) While forwarding the above requests of the Director of the Institute, the Hon'ble the Resident has requested that in view of the importance of the Institute and its farm in the present emergency the requests may be complied with It is also added that the farm must have been established

11) Supply of water to the Imperial Dairy Farm

owing to the proximity of the tank from which a regular supply of water could be drawn and that the farm has been drawing the water from the year 1905 and that in view of this right the farm should be supplied with water free of cost from an alternative source in case the tank is drained as part of the sanitation scheme

45) The Bangalore City Municipal Council who were consulted in the matter have resolved as follows -

"Resolved that the Council does not accept the position that the Dairy Farm has depended on the water of the Koramangala Tank for the supply of water to its wells and that there is any obligation on the part of the Council to supply water to it The Farm is not within the Atchkat of the tank Tha tank has been breached in the interest of public health and convenience under Sections 142 and 159 of the City Municipalities Act 1933 for the removal of mosquito nuisance The Council therefore is not agreeable to any of the proposals made by the Dairy Farm

This was unanimously passed by the House "

46) The Chief Engineer suggests that the best method of ~~supplying water is to~~ overcome the water supply difficulties to the farm lands is to arrange to supply sewage water to the wells It has been ascertained from the Deputy Commissioner Bangalore District that the Imperial Dairy Farm has not been paying any water rate for making use of the water from the tank and that the Koramangala tank and its atchkat lands are included in the Revenue accounts of the Koramangala village, Bangalore South Taluk

WD 1140—GPB—50 000—5-11-42

47) It has not been stated anywhere in the correspondence that there is any written agreement between the Mysore Govt and the authorities of the Institute that water would be supplied free of cost to the farm It is for consideration ~~whether~~ the use of the water for about 40 years may be considered to be as one giving them a "right" The tank water belongs to the Mysore Government and has no use was so far being made out of it It was perhpas unauthorisedly used for irrigating the farm lands by digging a sub tank in the waste weir of the tank and drawing the water supply thereto from which the water is pumped on to the wells and used for the farm lands When the water was diverted by breaching the tank, the supply seems to have been affected and now the question of 'right' is put forward It is estimated that every day 2 millions gallons of sewage water run through the main channel out of which the farm requires only two lakhs of gallons This sewage water now belongs to the Bangalore City Municipal Council and they are not willing to supply it free of cost, as seen from the above resolution The Director of the Institute suggests that sewage water should, for the present, be supplied from the main channel after ~~a~~ treating it This means an establishment of a sewage tank and other equipment The second point is that the tapping of this water by other gardeners along ~~with~~ the route of the main channel should be prevented This proposal cannot also be accepted The sewage water is now required for growing vegetables under the atchkat of the tank.

48) An estimate for Rs 14 000 for the formation of plots for for vegetable growing leading them out to cultivators has been submitted for

sanction and action has already been taken by the Bureau of Sanitary Engineering to lay out the plots make roads etc If the sewage water is now allowed to the Imperial Dairy Farm, the supplies to the vegetable gardners would be adversely affected and the lessees would also complain

49) Points for orders -

A 1 Whether the use of the water for 40 years without permission constitutes a right and whether it could be recognised now

2 Whether the Government of Mysore are bound to supply water in the absence of any agreement to the farm lands from an alternative source, in case the tank is depleted and water for irrigating the farm lands is found insufficient

3 ~~Thirdly~~ whether a sufficient quantity of sewage water may be allowed from the main channel at present without treating it The Board of Health is not willing to allow free of cost-

50) As however, it has been pointed out that the cultivation of the farm lands would be affected unless the water is supplied during this emergency as a war measure, it is a point for consideration, whether a small quantity of sewage water may not be supplied to the sub-tank for the duration of the war and the entire position reviewed after the war is over

15176

51) A Q may be consulted Law dept 28/6/43 on the points raised

52) Forwarded with Compliments to the Advocate General Mysore for favour of opinion on the points referred to at A supra B. Ramachandra 30/6/43 Asst Secretary

Ag. 383/42 Dy Bd/6/43 Advt 1/7/43 Gen 7.7.43

WD 1140—GPB—50 000—5-11-42

53) Point referred to me for opinion may be put in legal form thus Did the enjoyment of the benefit in question by the Imperial Dairy Farm for some 40 years, create in them a title to the benefit by virtue of Art 144 of the Limitation Act, which runs thus "For possession of any interest in immovable property, 12 years (from the date) when defendant's possession becomes adverse to the Plaintiff". The answer is an emphatic no, as, firstly, if either party had to file a suit in the matter, such a suit would not be a suit for possession, whatever else it might be, and, secondly, the enjoyment of the benefit by the Imperial Dairy Farm was on sufferance and never under a claim of right, and so was never adverse Vide 4 Bom L R, 721

54) The enjoyment falls under the denomination of "easement" as defined in S 6 of the Indian Easements Act, (V of 1882) and is provided for in S 15, parah 3, of the Act which runs thus Where a right of way or any other easement has been enjoyed by any person claiming title thereto, as an easement, and as of right, for 20 years" As the ingredients comprised in the underlined phrases are totally lacking in this case, the Imperial Dairy Farm has acquired no such easement

55) To sum up, the Imperial Dairy Farm has not, by reason of its long enjoyment of the benefit in the circumstances in question, acquired any legal right for the continuance of such enjoyment

56)

14) Supply of water to the Imperial Dairy Farm

His Highness the Maharaja of Mysore,
Law Department, Bangalore

*Dated Bangalore the 26th* Feby *1943*

Draining of the Koramangala tank adjoining the land occupied by the Imperial Dairy Institute on the Hosur Road

---

SIR

I am directed to refer to your letter No Pol 161/79-41, dated the 21st July 1942, and to forward a copy of a letter from the Director of Dairy Research, Bangalore, No C/27 of 1943, dated the 12th February 1943. In view of the great importance of the Institute and its farm in the present emergency, the Hon'ble the Resident would be grateful if the Government of Mysore could kindly see their way to comply with the request of the Director.

2 It is obvious that a farm like that of the Imperial Dairy Institute cannot exist without a sufficient supply of water. It must be conceded that the proximity of the Koramangala tank, from which a regular supply of water could be obtained, must have been the main consideration when selecting the present site for the farm. The farm has been drawing water from the Koramangala tank from the very beginning of its existence, which dates from 1905, and the Hon'ble the Resident therefore feels that it is only reasonable that when the tank is drained as a part of a sanitation scheme,

Continuation Sheet | File No / Current No 1 | of | Page

scheme, the Institute should be supplied with water from an alternative source and should not be asked to pay for it

I have the honour to be,
Sir,
Your most obedient servant,

SECRETARY TO THE RESIDENT

Tcn

Letter from the Director of Dairy Research to the Government of India, Bangalore, No. 2/27 of 1943, dated 12th February 1943 (18

- - - - -

Koramangala tank, drainage of - loss of irrigation facilities to the Imperial Dairy Institute lands

- - - - -

I have the honour to refer to your letter No. Ri 17-12/Ga dated the 4th August 1942, and the Government of Mysore letter No. Pol 161/11 73-41, dated the 21st July 1942, a copy of which was very kindly attached to the above letter, and to state that the point raised in the Government of Mysore letter with regard to the supply of irrigation water to the Imperial Dairy Institute from the Koramangalam tank were not replied to by this office sooner because it was considered desirable to study the conditions which would arise due to the drainage of the tank after the end of the monsoon.

2. I have now been in a position to state that the drainage of the tank has been definitely affecting adversely the supply of water from the three wells on which the farm has to depend for its irrigation, with the consequent depletion of the fodder supply to the cattle. In this connection I wish to refer to the following important points raised in the letter under question from the Mysore Government -

(a) In para IV it has been mentioned that it is ascertained that these lands are above the water-spread of the tank and are adjacent to it, and do not come under the ayacut of the Koramangala tank and water is being utilised directly from the Koramangala tank. I do not think this is quite correct. Not only does the farm lands abut on the tank over a water front of nearly 750 yards and get the water spread from the tank, but there is a sub-tank or diggi on the farm lands itself forming part of the main tank from this sub-tank two open channels are drawn which lead to two out of the three wells for irrigation purposes so constantly fed with tank water direct. Thus the water is being utilised on the farm directly from the Koramangala tank and the question of ayacut of the tank therefore, does arise.

(b) In para V it has been mentioned in connection with the depletion of the tank and conducting the sewage water to the proposed sewage farm that "even then there would be a constant loss of water in the sewage channel and some loss of moisture in the mill bed and it is improbable that the wells in the Institute would be adversely affected as they would derive their supply from springs and the normal underground drainage". My own belief and the actual experience does not bear out what has been stated. The Mysore Government started emptying the Koramangala tank little before the last monsoon by opening its sluices and although it did not by itself completely empty the tank altogether, a little water of two to three feet of water standing on major portion of the tank bed, the effect on the level of the water in the three wells was marked. One of the three wells which is about 30 feet from the tank bed and which derives its water supply from the seepage from the tank, at present, in the cold weather gives only 3 to 4 hours of pumping water as against 10 to 12 hours before the partial depletion of the tank as effected. This effect is going to be further accentuated as the complete depletion of the tank by digging a deep channel across the tank bed, which is now in full operation, is brought about. The water supply to the other two wells fed directly from the tank is similarly affected. Sufficient water is not allowed to flow to the sub-tank to keep it from the open sewage channel, as the latter is now permitted by the authorities to be tapped for the market gardeners all along the course, with the result the mill wells provide only 3 to 4 hours of pumping water in the cold season as per present, against 8 to 10 hours in the dry weather, ~~xxxx xxxx xxxxxxxxxx~~ formerly. I, therefore, look upon the approaching dry weather and the further depletion of the tank water immediately to provide the sub-tank with a sufficient quantity of water from the main sewage channel direct the mill wells due to a most difficult problem in regard to its fodder supply, especially over the other crops to be purchased in the open market. And

(c) In para IV reference has been made to the proposed diversion of the water called by the high figure mentioned by Mysore or the 17th cutcherry for correction with the drainage of the Koramangala tank. At this meeting the following alternatives to get over the difficulty were suggested -

(1) to divert water to the Imperial Dairy Institute - as here

(2) to excavate

19)

(i) To excava[illegible] trench for and lay the [illegible] bund and install [illegible] pumping [illegible] would rob [illegible] of [illegible] area, which it was [illegible] provide, but after [illegible] forth [illegible] the process [illegible] equipment could be [illegible] diesel [illegible] problematic [illegible] seem to [illegible] reduce [illegible] [illegible] the [illegible] pumping [illegible] irrigation [illegible] purposes.

(ii) "To treat the [illegible] channel [illegible] [illegible] supply [illegible] [illegible] [illegible]

---

Sir,

With reference to your letter No L 9528/Ml. 79-41-43 dated 23-3-43 on the above subject, I have the honour to state that the best way to overcome the water supply difficulties to the Farm lands, is to arrange to supply sewage water to the wells The Director of Public Health may also be kindly consulted in the matter

I have the honour to be,
Sir,
Your most obedient servant,

7/4/43

CHIEF ENGINEER OF MYSORE

Sir

With reference to your letter No L 9627/M1 79-41-46 42 dated 22/23rd March 1943, I have the honour to inform that the points raised in the letter are (1) a legal point whether the Imperial Dairy Farm has a right for the water and hether they have gained this right by previously making the arrangements with the Municipality or with the Government and (2) secondly a recuest is made to make necessary arrangements at the cost of the Municipality and supply the Dairy Farm with the recuired quantity of treated sewage free of cost As regards the first point I am not in a position to give any opinion Even as regards the second point the sewage disposal works and the outfall works will be under the charge of the Department until they are completed and they are the property of the municipality Whether the municipality would agree to spend the money for the benefit of the Daity Farm and whether they would give the quantity of water free of charge will have to be decided by the Municipal Council

SIR

With reference to your letter No L 9529/M1 79-41-43 dated the 22/23rd March 1943, in the matter of draining of the Koramangala Tank and supply of water to the Imperial Dairy Institute, I have the honour to state that the matter was considered by the Municipal Council at their meeting held on 25-5-1943 They have resolved that the Council does not accept the position that the Dairy Farm has depended on the water of the Koramangala Tank for the supply of water to its wells, that there is any obligation on the part of the Council to supply water to it and that they are not therefore agreeable to any of the proposals made by the Dairy Farm A copy of the Council resolution is herewith forwarded for favour of orders of the Government

I have the honour to be,
Sir,
Your most obedient servant,

Proceedings of the adjourned ordinary general meeting of the City Municipal Council Bangalore held on Tuesday the 25th May 1943

---

Draining of the Koramangala Tank as a Sanitary measure and the request of the Imperial Dairy Institute for certain facilities in respect of the supply of water to their Farm lands

The President moved the following resolution

' Resolved that the Council does not accept the position that the Dairy Farm has depended on the water of the Koramangala Tank for the supply of water to its Walls and that there is any obligation on the part of the Council to supply water to it The Farm is not within the Akhkat of the tank The tank has been breached in the interest of public health and convenience under Sections 142 and 159 of the City Municipalities Act for the removal of mosquito nuisance The Council therefore is not agreeable to any of the proposals made by the Dairy Farm

This was unanimously passed by the House

To

The Secretary to the Hon'ble the Resident
in Mysore

Subject - Draining of the Koramangala tank and supply of water to the adjoining lands belonging to the Imperial Dairy Institute Farm on the Hosur road

Sir,

With reference to the correspondence ending with your letter No R F 47-42/G&A, dated the 19th June, 1943, on the above-~~mentioned~~ subject, I am directed to state that the question of the alleged right of the Imperial Dairy Institute Farm to the use of the water of the Koramangala tank for the irrigation of the Farm lands has now been examined. The Govt of Mysore regret, ~~to find that~~ the Director of ~~the Farm~~ Reserve the right to withdraw ~~should put forward a claim for~~ the free supply of water from the tank as a matter of right in ~~virtue~~ view of the fact that ~~the Farm has had~~ been in the enjoyment of this ~~benefit for many years~~ privilege from 1905. ~~An examination of the question in its legal and other aspects shows, however, that the Farm had~~ The fact is that the Farm has been using the water ~~of the tank more~~ all along and on sufferance ~~than on any other ground and never under a claim of right, and that at all events, it~~ has acquired no legal right to the continuance of such ~~free supply~~ a privilege. The Govt would however

In the circumstances, the Govt, I am to say, regret that they are unable to accept the position taken by the Director in this matter, but they would be prepared to

advise the City Municipal Council of Bangalore, to whom the sewage water belongs to spare all the surplus water for the use of the [redacted], provided the authorities of the Farm agree to pay for such supply on terms to be mutually agreed upon between them and the Municipal Council

I have etc ,

Secretary to Government,

GOVERNMENT OF HIS HIGHNESS THE MAHARAJA OF MYSORE

General and Revenue Secretariat

*Dated Bangalore* 23rd July 1943.

No PdC 182

FROM

The *Secretary to the Government of His Highness the Maharaja of Mysore*
Development Department

To

*The Secretary to the Hon'ble the Resident in Mysore,*
*Bangalore*

Subject - Draining of the Koramangala tank and supply of water to the adjoining lands belonging to the Imperial Dairy Institute Farm on the Hosur Road.

Sir,

With reference to the correspondence ending with your letter No. R.F. 47-42/G & A., dated, the 19th June, 1943, on the above subject, I am directed to state that the question of the alleged right of the Imperial Dairy Institute Farm to the use of the water of the Koramangala tank for the irrigation of the farm lands has now been examined. The Government of Mysore regret that they are unable to accept the contention of the Director of Dairy Research that the Farm is entitled to the free supply of water from the tank as a matter of right in view of the fact that it has been in the enjoyment of this privilege from 1905. The fact is that the Farm has been using this water all this time on sufferance and not as a matter of right. It has, therefore, acquired no legal right to the continuance of such a privilege. The Government would, however, be prepared to advise the City Municipal Council of Bangalore, to whom the sewage water belongs, to spare all the surplus water for the use of the Farm, provided the authorities of the Farm agree to pay for such supply on terms to be mutually agreed upon between them and the Municipal Council.

I have the honour to be,
Sir,
Your most obedient servant,

Secretary to Government,
Development Department.
